

Independent Battery Distributors

FORKLIFT - SEALED - STATIONARY - SOLAR BATTERIES - CAR - TRUCK - DEEP CYCLE - MARINE

- *Ultra High Performance*
- *Genuine Maintenance Free*
- *Longer Service Life*
- *Extra Vibration Resistant*
- *Glass Matt Separators*

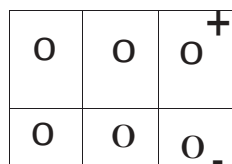

One of the Most Powerful & Reliable Truck Batteries in Australia

Independent Battery Distributors has identified a problem regarding the service life of truck, tractor & bus batteries available in Australia market. Many truck batteries supplied by our competitors last on average 1½ years or less and are causing increased down time and unnecessary service & maintenance cost for freight companies, farmers, bus companies, mining companies and government departments.

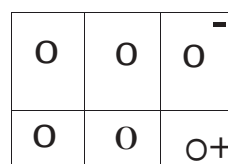

At IBD we only use the world's leading manufacturers, there are many factors why truck batteries have a short service life. One of the main reasons is because most other battery companies in Australia use expanded grid or hybrid technology. These are modern manufacturing techniques (to save manufacturing costs) used to produce batteries with good specifications however battery life is significant reduced compared to Die Cast Grid Technology.
